

ABSTRACT OF THE DISCLOSURE

A picture frame having an integrated picture storage area therein is provided. According to a first embodiment, the storage area is attached to the back of a conventional picture frame either during manufacture or by the end user. In this manner the device of the present invention can be utilized with any conventional picture frame assembly. The storage area includes receiver flanges that are mounted to the back of the frame. A storage box is slideably received onto the flanges. In an alternate embodiment, the frame extrusion is modified to include the receiver flanges by forming them with the frame extrusion itself.
